Summary

Results-driven **Application | Solution Architect** with 15+ years of experience designing and implementing enterprise-scale **cloud-native** solutions across banking, healthcare, engineering, and manufacturing domains. Proven expertise in **modernizing legacy systems, establishing microservices architectures, and delivering scalable applications** on AWS, GCP, and Azure. Strong background in System Design, API management, and event-driven development. Demonstrated success in leading cross-functional teams, driving digital transformation initiatives, and delivering cost-effective solutions aligned with business objectives.

CORE COMPETENCIES

Architecture & Design: Enterprise Application Architecture | Solution Architecture | System Design | Microservices Architecture | Domain-Driven Design | Cloud-Native Architecture | API-First Design | Event-Driven Architecture

Cloud Platforms: Amazon Web Services (AWS) | Google Cloud Platform (GCP) | Microsoft Azure | Multi-Cloud Strategy | Cloud Migration | Serverless Architecture

Development Technologies: Node.js | TypeScript | NestJS | C# | .NET Core | Angular | Full-Stack Development | RESTful APIs | GraphQL | JAVA | Python

API Management: API Gateway | Apigee | WSO2 API Manager | Swagger/OpenAPI | API Design | API Security | API Monetization

DevOps & Automation: CI/CD Pipelines | GitHub Actions | Azure DevOps | Jenkins | Infrastructure as Code (IaC) | Terraform | Ansible | AWS CloudFormation | Kubernetes | Docker

Data & AI Services: Agentic AI | GenAI | AWS Transcribe | AWS Comprehend | AWS Rekognition | AWS Textract | Azure AI | AI Tools like Claude, ChatGPT Enterprise, GitHub Copilot, Ollama

Databases: SQL Server | PostgreSQL | MongoDB | DynamoDB | Database Design | Data Modeling

Methodologies: Agile | Scrum | SAgE | DevOps | Architectural Decision Records (ADR)

Leadership & Program Delivery: Managed and led **40+ engineers across the last three enterprise-scale deliveries** | Technical & People Leadership | Architecture Governance | Multi-Team Coordination | Mentorship & Capability Building | On-Time, Quality-Driven Delivery

Standards & Compliance: SNOMED-CT | ICD | HIPAA | GDPR | Security Best Practices | Cloud Security

Professional Experience

Senior Solution Architect, NTT

02/2024 – present
Hyderabad, India

- Designed **cloud-native architectures** for high-traffic enterprise applications, reducing latency by **20%**.
- Led **API gateway implementations (Azure APIM, Kong, Apigee)** for secure, scalable API management.
- Implemented **CI/CD pipelines** using Terraform & GitHub Actions, improving deployment efficiency by **10%**.
- Migrated legacy monolith applications to **microservices architecture**, reducing maintenance costs by **25%**.
- Collaborated with stakeholders to define **technical roadmaps** and **cloud adoption strategies**.
- Define architectural blueprints, technology roadmaps, and migration strategies for cloud-native applications and microservices implementations
- Evaluate and select third-party tools and services to optimize solution delivery and reduce time-to-market
- Establish architectural governance frameworks and standards, ensuring security, scalability, and maintainability across enterprise systems
- Collaborate with stakeholders, including engineering teams, product managers, and business leaders, to translate business requirements into technical architectures
- Guide development teams on architectural best practices, design patterns, and coding standards
- Optimize application performance, security posture, and regulatory compliance across multi-cloud environments
- Ensure seamless system interoperability and integration between legacy and modern applications
- Mentor technical teams on architectural principles and emerging technologies
- Partner with DevOps teams to implement efficient CI/CD pipelines and infrastructure automation
- Led and managed cross-functional delivery teams of **30+ engineers across the last three large-scale enterprise programs**, ensuring on-time delivery, architectural consistency, and high-quality outcomes.

Specialist - Architect, L&T

05/2022 – 02/2024
Hyderabad, India

- Spearheaded Medical Data as a Service (mDaaS) Initiative, Architected healthcare data monetization platform enabling healthcare providers to utilize and monetize patient information.
- Led **security & compliance** initiatives using IAM policies and GDPR best practices.
- Developed **event-driven microservices** with NestJS & TypeScript, handling **100K+ API calls/month**.
- Led architecture discussions with global clients including Schneider Electric, Nokia, Zebra Technologies, and Google to understand requirements and deliver high-level solution designs
- Contributed to Statements of Work (SOW) and Request for Proposals (RFP) resulting in successful client engagements worth multiple millions
- Architected and implemented cloud-native solutions on AWS and GCP for enterprise clients across multiple industries

Endeavor

mDaaS – Medical Data as a Service

- Led and managed cross-functional delivery teams of **10+ engineers team for this initiative**, ensuring on-time delivery, architectural consistency, and high-quality outcomes.

Senior Consultant, Neudesic an IBM Company

07/2019 – 05/2022

- Analyzed existing systems to identify improvement areas and implemented processes, reducing **operational inefficiencies by 15%**
- Developed enterprise applications from requirements analysis through deployment using a market-focused approach.
- Designed and implemented web applications based on industry technical standards and best practices.
- Modernized legacy codebases to contemporary development standards, **reducing operating costs by 35% and improving functionality.**

Hyderabad, India

Principal Development Engineer, Aveva

06/2013 – 06/2019

Aveva Connect is Aveva's first approach to the Cloud(AWS)

Hyderabad, India

- Connect will consist of a Platform with services, User management, and accessibility
- AWS is the first approach for Aveva Connect, and it follows SAAS(Software as a Service)
- Architecture: Microservices
- Codebase: NodeJS, AngularJS, Serverless package, and Source Code Management in GIT

Software Engineer, Fidelity National Information Services

01/2011 – 06/2013

Business Internet Banking: Commercial and investment banking tool for financial asset management

Gurugram, India

TECHNICAL PROFICIENCIES

Programming Languages: TypeScript, JavaScript, C#, SQL, Python, NodeJS, Java

Frameworks: NestJS, .NET Core, Angular, Express.js

Cloud Services: AWS, Azure, GCP

Containers & Orchestration: Docker, Kubernetes, AWS ECS, GKE

API Technologies: REST, GraphQL, API Gateway, Apigee, WSO2

Tools: Git, GitHub, Bitbucket, JIRA, Confluence, SonarQube, Postman

Architecture Patterns: Microservices, Event-Driven, CQRS, Domain-Driven Design, Serverless

Standards: CNCF Cloud Native, OpenAPI, OAuth 2.0, JWT

Certificates

- Azure DP-900
- Azure AI-900
- NVIDIA AI Technical Curriculum
- Cloud Solution and Design Course

Education

Information Technology, Rajasthan Technical University

2006 – 2010

Jaipur, India
